

Abhishek Tallapragada

Application Engineer At Unistring Tech Solutions

I started my journey in computer science, where I gained a strong understanding of how programming works. Over time, I realized I enjoy low-level programming, which led me to join an embedded systems company. There, I worked with microcontrollers, learning and applying various techniques. I'm particularly interested in programming integrated circuits and exploring the possibilities of the Internet of Things.

WORK EXPERIENCE

Application Engineer (Embedded Software) Unistring Tech Solutions

2023 - Ongoing

Hyderabad

Design and development in Electronic Warfare Systems, RADAR and simulators.

Job Role

- Worked as an Embedded Engineer on defense based R&D projects.
- Gained expertise in programming with PIC microcontrollers, Arduino, and SAMD21 devices.
- Conducted R&D on inertial measurement units (IMUs).
- Developed strong skills in hardware debugging.

PROJECTS

Inertial Measurement Unit (IMU) R&D and Optimization (07/2024 - Ongoing)

- Conducted in-depth R&D on Inertial Measurement Units (IMUs) to enhance their accuracy in determining an object's orientation in 3D space.
- Implemented and optimized algorithms from research papers to improve performance while keeping the module cost-effective.
- Successfully developed innovative solutions to bridge the gap between low-cost hardware and high-precision orientation tracking.

Automated Cable Harness Testing and Optimization (01/2024 - 06/2024)

- Designed and developed a testing equipment for automated cable harness testing, ensuring fast and reliable continuity checks.
- Programmed a PIC microcontroller to verify the integrity of multiple cable bundles with connectors in seconds, significantly reducing testing time.
- Streamlined the testing process, saving manpower and enabling faster cable integration, boosting overall efficiency.

EDUCATION

Bachelor of Technology

Godavari Institute Of Engineering And Technology

2018 - 2022

Rajahmundry

Courses

- Computer Science and Engineering

Board Of Intermediate Education

Tirumala Junior College

2016 - 2018

Rajahmundry

Courses

- Mathematics, Physics & Chemistry

SKILLS

LANGUAGES : C, C++,
Embedded-C, Java, Javascript
Design: UX / UI

HARDWARE: Multimeter, Logic
Analyzer

SOFTWARE: Linux, MIKROC ,
MPLAB X IDE, VS CODE,
ARDUINO IDE

MICROCONTROLLERS: PIC
MICROCONTROLLER,
ARDUINO : NANO, UNO, MEGA,
SAMD21, ESP8266MOD

STANDARDS: UART, I2C, SPI,
TCP/IP

Technical Documentation

ACHIEVEMENTS

I transitioned from computer science to embedded systems, showcasing adaptability and growth in my technical skills.

Contributed to open source on GitHub, demonstrating collaboration and software development skills. Ready to add value to new opportunities.

CERTIFICATES

GNSS GPS IMU INS Sensors - for ADAS and Autonomous Vehicles

GNSS + INS sensors and related correction technologies that are highly used in ADAS and AD development

The Complete Javascript Course: From Zero to Expert!

Udemy

Spoken Tutorials Java Training
